 **IDN Conversion Tool**

Note: Current Windows operating systems do not fully support the IDNA2008 specification. Due to this, only IDNA2003 compliant IDNs are supported.

Enter an IDN (Internationalized Domain Name) using the Unicode or US-ASCII (punycode) format.

US-ASCII (punycode) as per IDNA2003:

Unicode as per IDNA2003:

---

Enter two IDNs/domains to determine whether they are considered equal by the control panel or IDNA2003 specification.

Result:

[How To Get A Unicode Domain With Special Characters \(puny Code\)](#)

The screenshot shows a web application titled "IDN Conversion Tool". It features a sidebar menu on the left with items like "ccount Menu", "eers", "paces", "y Ecommerce", "nline Store", "achineKey Generator", "N Conversion Tool", "unning Tasks", and "udit Log". The main content area has a globe icon and a note: "Note: Current Windows operating systems do not fully support the IDNA2008 specification. Due to this, only IDNA2003 compliant IDNs are supported." Below the note, there is a text input field containing "cañones.com" and a "Convert" button highlighted with an orange border. Underneath, two output fields are shown: "US-ASCII (punycode) as per IDNA2003:" with the value "xn--caones-xwa.com" and "Unicode as per IDNA2003:" with the value "cañones.com". At the bottom, there is a "Compare" section with two empty input fields and a "Compare" button. A "Result:" field is also present but empty.
